Bombas de Agua Water Pumps

www.stdr.com.mx

Fabricadas bajo especificaciones de equipo original, las bombas KG utilizan materiales de excelente calidad.

Tips Técnicos

Elemento del sistema de refrigeración que tiene por función impulsar el refrigerante a fin de hacerlo circular por el sistema, tanto al interior del motor como por el radiador. La bomba al recibir el giro del motor, hace que su turbina (propela) -solidaria al eje- gire también y el movimiento rotatorio de sus álabes impulsa al refrigerante por los distintos conductos a recorrer.

La bomba de agua está constituida por diferentes componentes como son: balero, retenes (sellos), bujes, propela y carcasa. Y estos al estar en constante contacto con el líquido refrigerante pueden sufrir daños prematuros si este no se encuentra en óptimas condiciones ya que la suciedad, el sarro y el óxido, son los principales causantes del deterioro o fallo total de la bomba de agua. Por tal motivo es recomendable que el líquido refrigerante se encuentre lo más limpio posible y sea de buena calidad.

Nota:

Cuando reemplace la bomba de agua verifique que no exista un juego excesivo en el eje de la bomba de agua, ya que un eje flojo puede aspirar aire dentro del sistema. Si la bomba esta fuera del motor cerciórese de que el impulsor este bien apretado y no muy corrido. Asegúrese de que los impulsores concuerden, es posible que en algunas aplicaciones, una bomba de rotación estándar esté equipada con un impulsor de rotación inversa.

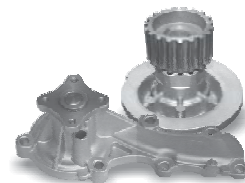

Causas por las que puede fallar la bomba de agua

- Existencia de sarro y óxido en el sistema
- Uso de anticongelante de mala calidad
 - Fugas en los sellos
 - Balero amarrado
 - Defecto de fabricación

La búsqueda por número No. de parte nos permite conocer a detalle la aplicación y la imagen de cada producto, ordenado numéricamente. El recuadro gris nos indica la armadora de la unidad automotriz, y el negro el número de parte.

La segunda opción de búsqueda es localizando la armadora, el automóvil, motor y modelo de la unidad. Esto nos ayuda a conocer la pieza que debe instalarse, en observaciones se encuentran las características que diferencian un motor de otro.
