Sistema de Enfriamiento

Radiadores
y Tapones para radiador

2012

El radiador es un elemento esencial en el sistema de enfriamiento de su automóvil, su función principal es reducir la temperatura del refrigerante del motor.

Este proceso se realiza induciendo al anticongelante proveniente del motor cruzar del tanque de entrada al de salida recorriendo un serie de tubos que al contacto con el aire proveniente del exterior se realiza un intercambio de temperaturas, logrando así que el refrigerante al salir del radiador y dirigirse nuevamente al motor reestablezca sus condiciones para realizar una buena disipación del calor generado dentro de las camaras de combustión.

Radiador Flujo Vertical

Radiador Flujo Horizontal

El diseño de cada radiador depende del fabricante, los productos no son intercambiables y se debe respetar la estructura del mismo.

Características de Producto

- * Soldadura de alta frecuencia con recubrimiento para evitar la corrosión.
- * Ofrecemos productos de alta eficiencia para lograr un mejor enfriamiento en el menor tiempo posible.
- * Fabricados con especificaciones de equipo original y materia prima de primer uso.
- * Incrustaciones en el tubo para lograr turbulencias y reducir temperaturas tras la fricción.
- * Accesorios necesarios para lograr una correcta instalación a la primera.
- * En algunas aplicaciones tenemos opciones de venta, la única variante se presenta en la construcción del radiador.
