Tommas de Agua Water Flange

www.stdr.com.mx

Nuestras tomas de agua fabricadas en Nylon ó aluminio pueden incluir termostato, bulbo de temperatura y/ó junta. En cada número de parte se indica los accesorios que contienen.

Tips Técnicos

Sirven como cubierta del termostato y soportan la salida de anticongelante cuando este se encuentra a la temperatura más alta del ciclo, conectan al motor con el radiador.

Al momento de la instalación se recomienda limpiar la base del block donde va a ser instalada así como verificar el buen estado de las mangueras también es recomendable usar abrazaderas de presión, en caso de usar abrazaderas de ajuste manual ser generoso al momento de apretar ya que los brazos conectores suelen ser poco resistentes en especial los fabricados en nylon.

Causas por las que puede fallar la toma de agua

- Defecto de fabricación
- Mala instalación
- Problemas en el sistema de enfriamiento
- Termostato pegado.
